

Automated Indicator Sharing (AIS)

Powered By Analyst1

What is AIS?

Automated Indicator Sharing (AIS) enables the exchange of cyber threat indicators between the federal government and the private sector at machine speed.

Why is it Important?

AIS is part of a CISA effort to create a cyber ecosystem where as soon as a stakeholder observes an attempted compromise, the cyber threat indicator of compromise (IOC) will be shared in real time with all partners, protecting everyone from that threat.

How to Participate?

In 2015, there was a congressional mandate to DHS, among others, to revolutionize how government agencies share threat data. AIS is one critical pillar towards this endeavor.

For more information, or to sign up to participate in AIS, visit:

www.us-cert.gov/ais.

CYBER+INFRASTRUCTURE

Who is Analyst1?

Analyst1 is a US-based cyber security company known for its threat intelligence and SOAR platform.

What is Analyst1?

Analyst1 is the software CISA uses internally to operationalize intelligence through continuous and automatic ingestion, enrichment, correlation, and sharing of indicators.

How does Analyst1 enable AIS participation?

Analyst1 consumes and correlates AIS data at machine speed with existing threat intelligence data, providing security teams with comprehensive and evolving threat context enabling decisive and confident defensive actions.

Analyst1 also includes 150+ sources, millions of curated IOCs, and multiple integrations across existing security products, allowing the ability to operationalize threat intelligence and maximize return on current security investments.

How to get Analyst1?

Analyst1 is the "easy button" to achieve AIS compliance and can be installed in hours. Consuming and publishing to AIS is a simple checkbox during install. For more information, or to schedule a demo email us at: info@analyst1.com.
