

# Outsmart cyber threats

## Overview

Enterprises around the world face distinct cybersecurity challenges, including safeguarding proprietary information, integrating diverse operational systems, protecting critical infrastructure, and much more. Ensuring proactive defense against threats is crucial to keep sensitive data safe from espionage and unauthorized access.

Analyst1 is tailored for the commercial market to address two core cyber threat intelligence questions essential for the identification, assessment, and mitigation of cyber threats:

- “So what? *How will this impact business?*”
- “Who cares?” *How are my stakeholders impacted?*”

With over 560,000 new threats detected daily, **de-duplication** and **automation** enable unmatched efficiency to stay ahead of those cyber threats.

Analyst1 has developed automation across all essential cybersecurity frameworks. Our platform delivers the comprehensive coverage cyber analysts need to **minimize alert fatigue** while **improving security outcomes** based on cyber threat intelligence.

## Introducing Analyst1

Analyst1 is an industry-leading cybersecurity solution provider that specializes in advanced threat intelligence. Analyst1 helps clients in every major vertical transform raw intelligence into actionable insights that improve their security outcomes. Some of the most sophisticated government and commercial organizations use Analyst1's platform to investigate threats, manage vulnerabilities, and dramatically reduce response time.

Analyst1's advanced Threat Intelligence Platform (TIP) was built by industry veterans for organizations to identify, mitigate, and respond to cyber risks. Automated data ingestion and investigations transform security operations through superior threat analysis that also analyses the effectiveness of countermeasures in a single platform.

Founded in 2012, Analyst1 has earned the trust of the U.S. Government and enterprises globally. We remain steadfast in our mission to transform data into action.

Outsmart cyber threats

Intelligence-driven **automation** reducing manual work and **empowering** analysts.

Real time threat monitoring

Advanced data collection and analysis

Collaboration and info sharing

Threat hunting capabilities

Customizable and scalable

Threat intelligence reporting
