

Analyst1 and Intel 471

Outsmarting cyber threats together

Introducing Analyst1

- **Analyst1** is an orchestrated threat intelligence platform that enables security teams to operationalize intelligence across their existing security ecosystem.
- With native integrations into leading intelligence sources, SIEM, SOAR, ITSM, VM, EDR, proxy, firewall, and IDS/IPS solutions, Analyst1 allows teams to aggregate, enrich, and transform threat data into threat intelligence for streamlined detection and response. By supporting rule and sensor deployment directly from the platform, teams can proactively mitigate known threats – reducing response latency and eliminating manual processes.
- Analyst1 also centralizes intelligence workflows, minimizing noise and enabling analysts to rapidly answer critical questions across their infrastructure: who is targeting us, what tactics are being used, when were we impacted, and where is the threat originating?

Key Use Cases for Analyst1

Use Analyst1 to:

- Centralize and operationalize threat intelligence across your tools
- Enrich detections with deeper context for faster decisions
- Break down workflow silos and reduce response times

A1DEFENDER
PARTNER PROGRAM

Introducing Intel 471

Intel 471 empowers enterprises and governments to identify, prioritize, and prevent cyber-attacks. We use cyber HUMINT to draw unique and actionable insight from the cyber underground where others draw only suspicion, to ensure organizations stay ahead of attackers and proactively defend against cyber threats.

Use Intel 471's Solution to:

- Gain early insight from exclusive cyber underground sources where HUMINT collection meets actionable CTI
- Make threat-informed risk decisions with organizationally-relevant data.
- Speed up your cycle of threat awareness.
- Mitigate and even avoid cyber-attacks.

Actionable Insights and Empowered Defense with Analyst1 & Intel 471

Analyst1 and Intel 471 jointly empower organizations to navigate complex cyber risks.

Analyst1's orchestrated threat intelligence platform automates critical tasks, enabling cybersecurity teams to swiftly identify and tackle cyber risks across enterprise networks and endpoints. By seamlessly integrating Intel 471 data from their core intelligence capabilities, Analyst1 streamlines threat analyses, vulnerability management, and incident response.

This integrated solution equips organizations with essential insights to evaluate, structure, and fortify their cyber defenses. From prioritizing attack indicators, to sharing timely advisories and mitigating identified threats; together, Analyst1 and Intel 471 create a powerful and actionable solution to counter even the most sophisticated cyber threats.

Direct Impact

- **Streamlined Threat Focus:** Analyst1 integrates Intel 471 intelligence to help analysts manage the most critical threats. Together, we shift focus to the highest priority alerts and enable more efficient security workflows.
- **Deepened Adversary Intelligence:** Combined Intel 471 data with Analyst1 correlation reveals attack patterns and threat actor motives. With richer context, security teams can respond more quickly and confidently.
- **Early Warning Threat Disruption:** Using Analyst1 and Intel 471, teams can detect emerging threats early and act proactively to minimize the impact of potential attacks.
