

Operating as One

Unified Intelligence.
Coordinated Action.
One Operational Picture.

The Challenge

Security teams don't lack tools. They lack alignment. Most organizations operate across:

- Separate SIEM environments
- Disconnected SOAR workflows
- Standalone ticketing systems
- Isolated scanners and sensors
- Fragmented intelligence feeds

Each team sees part of the threat landscape, but no one sees the full picture—leading to duplicated effort, inconsistent response, and operational drag.

The Analyst1 Difference

Analyst1 connects intelligence, systems, and teams into a shared operational fabric. Instead of piecing together context across platforms, Analyst1 ensures everyone works from the same enriched, real-time intelligence foundation.

Organizations move from

How It Works

Analyst1 enables true operational alignment through four core capabilities:

- 1 Shared Intelligence Context** — Correlate actors, indicators, assets, and vulnerabilities into a single, enriched source of truth across all tools.
- 2 Deep Tool Integration** — Connect SIEM, SOAR, ticketing, scanners, and sensors with bi-directional intelligence flow—no more swivel-chair analysis.
- 3 Cross-Team Workflow Coordination** — Align CTI, SOC, IR, and vulnerability management teams by routing intelligence to the right owners automatically.
- 4 Consolidated Case & Operational Visibility** — Refine caseloads inside ticketing systems, prioritize what matters most, and maintain executive-level visibility across all response efforts.

What Analyst1 Delivers

Alignment

Every team works from the same intelligence picture.

Precision

Prioritized intelligence drives focused action.

Resilience

A coordinated defense posture instead of fragmented reactions.

Efficiency

Eliminate redundant analysis and tool hopping.

Scale

Operational consistency across environments and geographies.

Other solutions were piecemeal. Analyst1 is more than a TIP. It refines our caseload in ServiceNow and gives us far more value from our intelligence... We're going to consolidate so much effort in here.

— CTI Lead, Global Financial Institution

Why It Matters

Without Analyst1	With Analyst1
Disconnected tools	Integrated security stack
Siloed teams	Coordinated operations
Duplicated analysis	Shared intelligence context
Manual reconciliation	Automated alignment
Fragmented visibility	Unified operational picture

Operating as One isn't just integration—it's operational unity, where every team, tool, and decision is connected by shared intelligence.

The Bottom Line - Threats exploit gaps between systems and teams. With Analyst1, your intelligence, tools, and people operate as one.
