

TAXII Server: Enterprise Threat Intelligence Distribution

Distribute consumable, actionable intelligence, built for how modern security teams work.

Analyst1's TAXII Server delivers enterprise-grade threat intelligence distribution, integrated natively into your intelligence operations platform, not bolted on as an afterthought. STIX 2.1 over TAXII 2.1. Simple setup. No external infrastructure. No artificial pricing tiers.

Enterprise Features in Platform

The Challenge

- Modern security operations depend on timely, high-quality threat intelligence, but distributing that intelligence remains a bottleneck.
- Manual processes that delay action and introduce risk
- Complex platforms require significant time, cost, and overhead
- Fragmented workflows that don't integrate with existing tools
- Offerings are commonly overcharged, over-complicated, tied to higher implementation effort, focused on standards over quality, and have unnecessary access limitations

The Analyst1 Approach

- **Simplicity-First Architecture:** Analyst1 TAXII is built into the intelligence operations platform without the legacy complexity of platforms originally designed for centralized publishing. Setup is straightforward: create collections, generate keys, distribute. No additional infrastructure.
- **Built for Automated Polling:** Collection throughput scales with your deployment, so partner platforms and downstream tools can connect and poll as needed.
- **Quality-Focused Creation:** STIX SDOs and correlating relationships are generated from curated intelligence, often maintained and reviewed by humans, not third-hand STIX from unknown or undiscernible origin.
- **Enterprise Access Control at Scale:** Access keys enable per-collection dissemination control, enterprise-grade thinking that competitors make unnecessarily complex.
- **Managed Relevance:** Analyst1 handles the heavy lifting of keeping collections current, aging off stale indicators and curating what's shared, so consumers always poll a feed that reflects your latest intelligence, not a backlog.
- **Seamless Integration Without "Rip and Replace":** Customers don't need to replace their existing security infrastructure. STIX 2.1 over TAXII 2.1 with basic authentication ensures minimal integration overhead, customers can ingest intelligence directly into SIEMs, XDRs, and EDR platforms without rebuilding workflows.
- **Dedicated Tenant Control:** Whether you host or rely on Analyst1 for hosting, rest assured that you can scale up or down as needed to meet your community's needs.

Key Capabilities

- Create intelligence collections in minutes, no complex configuration
- Generate per-subscriber access keys for granular access control
- STIX 2.1 over TAXII 2.1 with basic authentication
- STIX is generated for you from quality, priority requirement-driven intelligence, not third-hand STIX of unknown provenance
- Dedicated tenant: cloud-hosted or self-hosted, scalable on demand
- Rotate or revoke keys at any time without disrupting other subscribers
- No rate limiting

Who it's Built For

Enterprise Security Operations

Eliminate manual distribution delays. Intelligence quickly reaches your SIEM and XDR.

ISACs & Information Sharing Communities

Scale to hundreds of members without scaling operational overhead. Members integrate once; you automate everything.

MSSPs & Service Providers

One platform, unlimited clients. Each client self-serves through a standard protocol, no custom integrations per engagement.

Regulated Industries

Meet compliance requirements for standardized intelligence sharing with built-in audit trails and access control regulators recognize.

Competitive Comparison

Feature	Analyst1	Typical Competitors
Implementation Timeline	1 day	6–12 weeks
External Infrastructure	Not required	Often required
Per-Collection Access Control	Included	Limited or premium add-on
Enterprise Licensing Transparency	Clear, included	Complex, premium pricing
MSSP-Ready	Yes	Limited support
Intelligence Quality Focus	Human-curated & verified	Often aggregated or unverified

Experience TAXII distribution in minutes. Create your first collection, generate access keys, and integrate with your security tools, without complexity or delay.

How it Works

Create

Set up intelligence collections by threat domain, audience, or classification level

Generate

Issue access keys per subscriber, granular access for teams, clients, or partners

Distribute

Clients fetch intelligence automatically in real time. No manual steps.
